## DETAILED ACTION

### *Amendment Entry*

1. Applicant's amendment and response filed 7/15/02 in Paper No. 13 is acknowledged and has been entered. Original claims 1-13 have been <sup>cancelled</sup> ~~amended~~. Claims 14-29 have been added. Accordingly, a restriction requirement has been set forth for the newly submitted claims deemed to encompass three groups of inventions, not recited in the original cancelled claims.

### *Election/Restrictions*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 14-20 and 25-29, drawn to methods and kit for screening compounds that bind a target, classified in class 436, subclass 177, for example.
  - II. Claims 21-23, drawn to methods for screening compounds from *Carthamus tinctorius*, classified in class 424, subclass 8.2, for example.
  - III. Claim 24, drawn to compound, classified in class 530, subclass 344, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2)

that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination requires that extracted compound 1) have antithrombic activity upon coagulation pathway and 2) is able to specifically bind gpIIbIIIa glycoprotein. The subcombination has separate utility such as for use in making controls or standards for evaluating cellular function.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the Invention of Group I can be used to obtain and isolate a biological contaminants, from environment.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of Group III as claimed can be obtained by gel electrophoresis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, and the search required for Group II is

not require for Group III, restriction for examination purposes as indicated is proper. Literature search for each method and compound is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
